

**ETHERIFIED CARBAMATE FUNCTIONAL COPOLYMERS
OF ISOBUTYLENE TYPE MONOMERS,
AND THEIR USE IN CURABLE COMPOSITIONS**

5

Abstract of the Invention

A reaction product is provided, of reactants comprising:

- a) at least one copolymer comprising at least 30 mol % of residues
10 having the following alternating structural units:

-[DM-AM]-

wherein DM represents a residue from a donor monomer, AM represents a
residue from an acceptor monomer, the copolymer containing pendant
carbamate groups or groups that can be converted to carbamate groups;

- 15 b) at least one aldehyde; and
 c) at least one monohydric alcohol;

wherein when the copolymer (a) contains groups that can be converted to
carbamate groups, the reactants further comprise:

- d) at least one material that will convert said groups into carbamate
20 groups. The reaction product is suitable for use in a variety of curable
compositions, which are also provided.
